

CECON

CONTRACTING

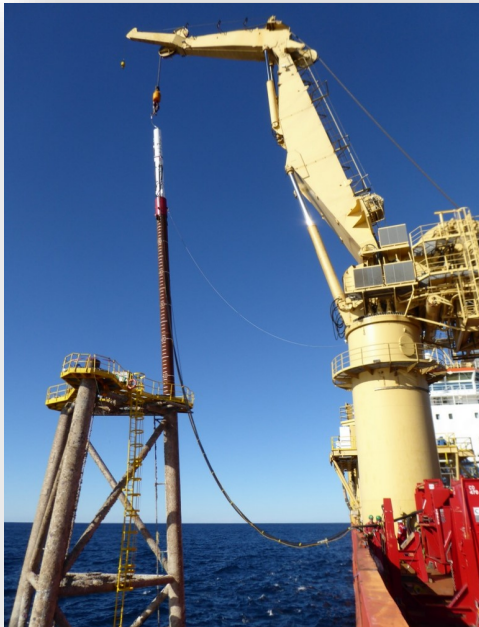

A Global Offshore and Subsea Installation Contractor

CECON CONTRACTING

Cecon Contracting AS is an Offshore and Subsea Contractor providing Project Management, Engineering, Subsea Installations and De-commissioning for the Offshore Oil & Gas Industry, the renewables & the utilities industries.

Cecon Contracting is part of Fara Holdco Limited, owners of Rever Offshore.

Cecon Contracting maintains a "Lean and Nimble" contracting organization in line with our focus on reducing costs, in employing a core group of highly experienced and multi-disciplined engineers. Additionally, having a network of specialist resources as contractors and partners, based on long term working relationships.

SMART BUSINESS ORIENTATED

Cecon Contracting operates only with chartered vessel, which creates a unique opportunity to utilise the market at a time with historically low rates. Each project is performed with a vessel selected specifically to suit its unique demands, delivering value and quality to our clients.

Depending of type of project, scope of work, and client preferences, the project team will be mobilized and located close to the Client.

Organizational growth is ongoing and organic, as may be dictated by projects and support to the Rever Offshore AS Construction vessels.

RESOURCES

Cecon Contracting has its headquarter in Oslo, Norway and a subsea base near Arendal.

The subsea base comprises of fabrication facilities, storage yard and loadout quay where a variety of equipment can be mobilised, including rigging and workshop containers, reel drive systems, tensioners and chutes, Pipeline S-lay spread.

In addition this base provides the perfect platform for project mobilisation activities including seafastening and vessel repair/maintenance.

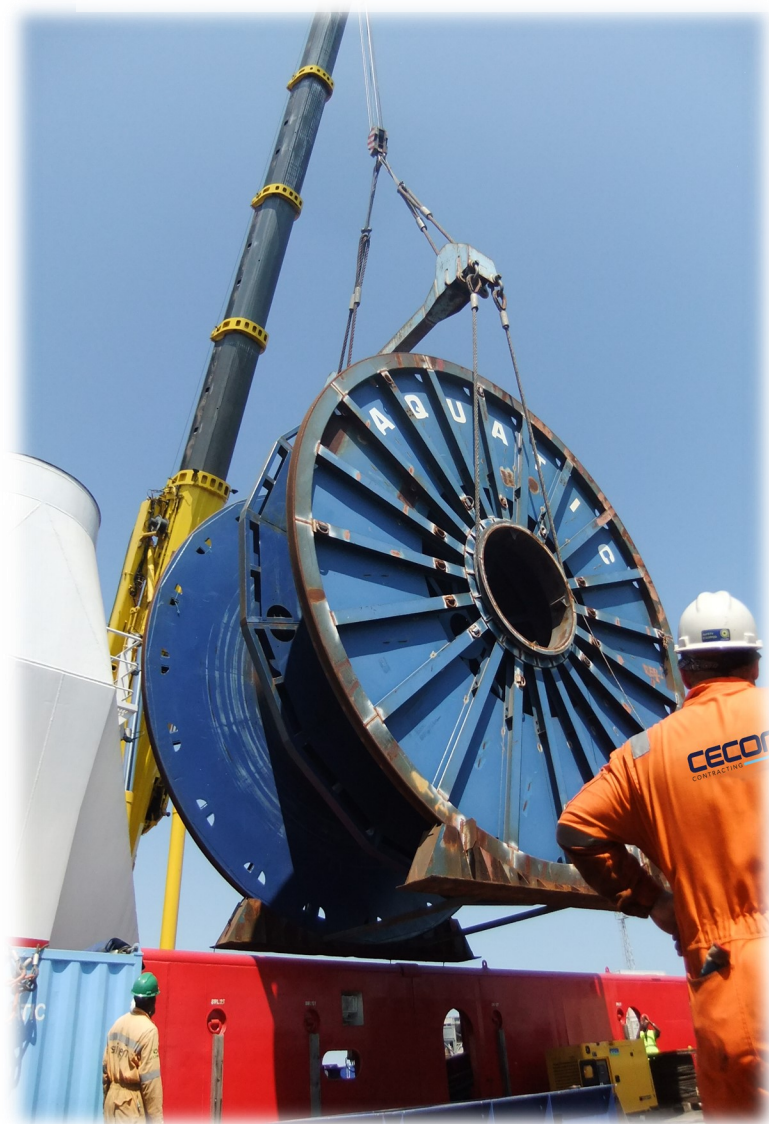

EQUIPMENT

Cecon has its own lay spread for rigid pipeline, flexible flowline & umbilical and also for power & FO cable.

Equipment can be mobilized on a variety of construction vessels available in the spot market or group internal vessels.

Purpose built installation aids or permanent equipment can be quickly engineered, fabricated and tested for fast track projects.

Cecon capabilities

OIL & GAS

SUBSEA

- Rigid pipeline installation on S-lay
- Flexible & Umbilical installation
- Power cable transport & installation
- Fibre optic & seismic cable transport & installation
- Subsea structures transport & installation

- Piling activities
- Route clearance / preparation
- Crossing preparation

RENEWABLES

SURFACE

- Topside installation
- Jacket installation

MOORING

- Anchor installation
- Mooring line inspection and replacement
- STP buoy installation

TELECOMMUNICATION

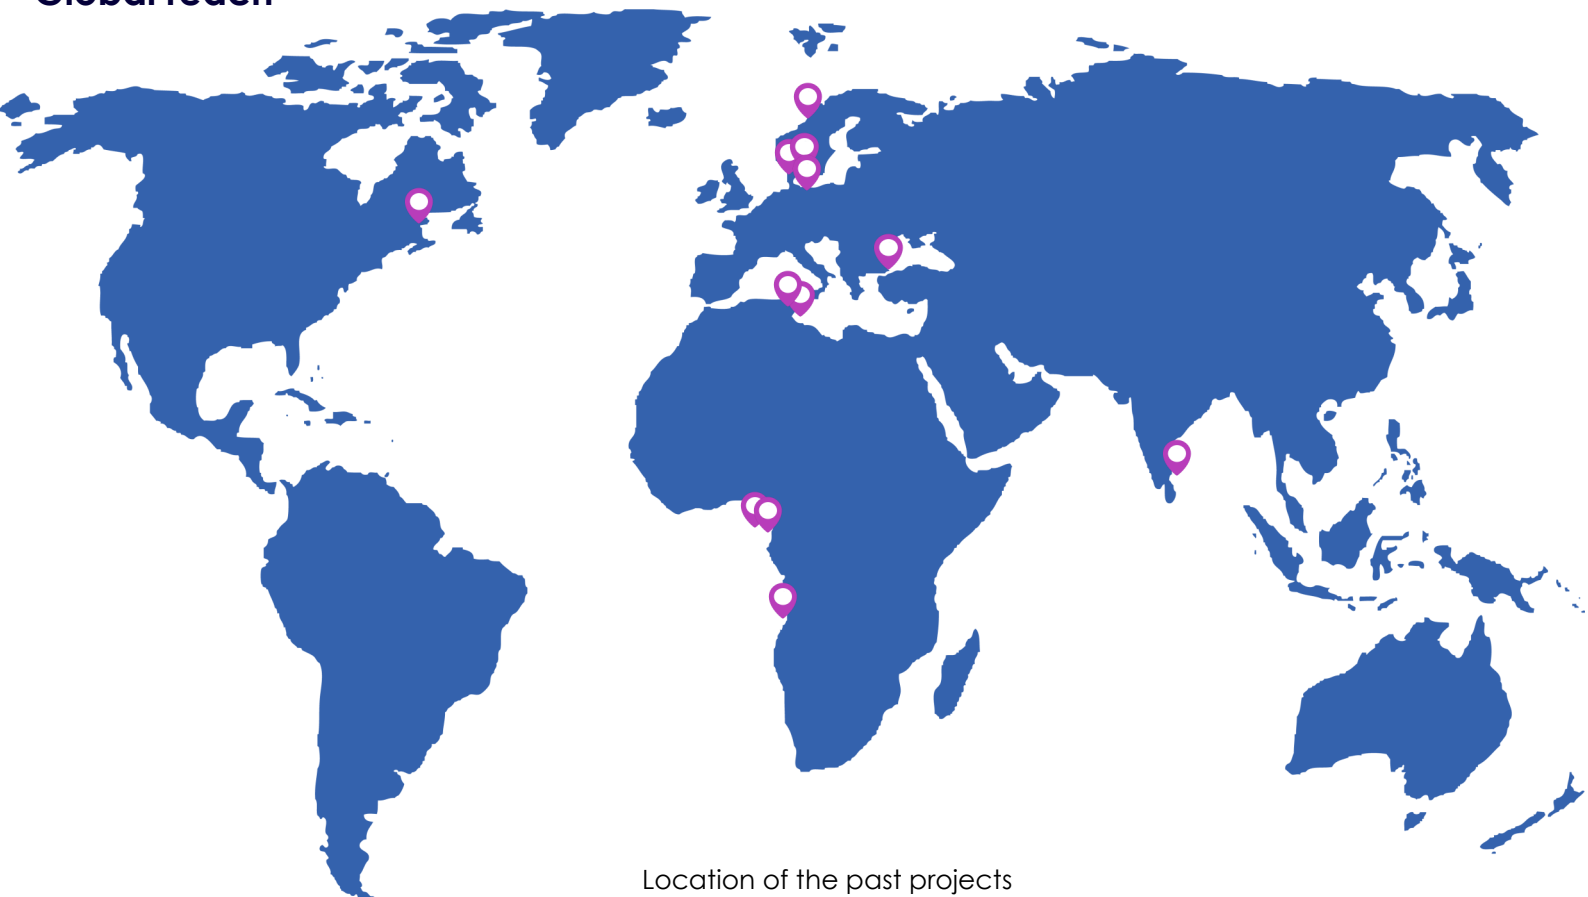

DECOMMISSIONING

- Subsea cutting & recovery
- Pipeline & flexible recovery
- Umbilical, power cable & fiber optic cable recovery
- Removal of subsea assets
- FPSO disconnection & removal
- Towing & transport

SEABED INTERVENTION

- Trenching
- Ploughing
- Excavation
- Dredging

Global reach

Location of the past projects

Cecon Contracting is an “Asset Light” offshore and subsea contractor involved in the fields of decommissioning and installation for the offshore oil & gas and the renewables industries.

Cecon Contracting has a clear vision to stay “Lean and Nimble”, focusing on delivering projects at a lower cost and with an overall shorter lead time than the typical “Tier 1” Contractors.

As such, Cecon Contracting is the right partner for companies with typical marginal field developments, striving to deliver solutions which are Fit for Purpose at a competitive cost.
